

## Business System Analyst (M/W)

### Overview

**Emovis** is the leading service delivery and technology arm of **Abertis** in the global markets for all electronic tolling and smart mobility solutions (Intelligent Transportation System).

With over **600 employees** across **7 countries**, we are committed to helping millions of motorists travel seamlessly along the world's busiest highways.

The company is 100% owned by Abertis, the **world's leader in highway concessions** (8300 km of roads). This backing makes emovis a long-term and reliable partner for Road Authorities and Highway Concessionaires.

Emovis is focused on keeping roads moving through all electronic tolling and smart mobility solutions. We design, implement, maintain and operate state-of-the-art road pricing solutions, including:

- All Electronic Tolling (AET),
- Open Road Tolling (ORT),
- Multilane Free-Flow Tolling (MLFF),
- Pay-by-Plate Tolling (also known as Video Tolling),
- Non-Stop Electronic Toll Collection (ETC) lanes,
- Road User Charging solutions (also known as Pay As You Drive),
- Nationwide Truck Tolling schemes,
- Congestion Charging Schemes.

### Responsibilities

You will be part of our Delivery & Solution Direction.

The Business System Analyst (M/W) provides business process modeling and design services for the internal project team and as definition of works for emovis back office solution provider.

Main activities:

- Define business requirements and facilitate requirements gathering sessions,
- Convert requirements into functional and technical specifications,
- Conduct and lead client meetings to determine software configuration elements,
- Recommend appropriate business solutions to clients to ensure a high level of satisfaction with emovis' products and services,
- Create high-level data and process models of business processes: requirements, activities, work flow, and the display of system behaviour,
- Create functional design documents, process flow charts, and report specifications,
- Participate in issues resolution, requirements management, analysis and design, testing, and transition of applications into the production environment,
- Follow-up on test activities, including participation in customer UAT testing of our products and service deliverables,
- Serve as a liaison between the company and the end customer during various phases of the project and for his/her area of knowledge/expertise.

Additional activities:

- Recommend enhancements to the solutions that will support optimization of customer operations,
- Build and maintain working relationships with clients, employees, consultants, vendors, and other team members.

### Skills/experience

In the software areas: MS-SQL queries, XML, MS Office Suite, Visio, Jira and Confluence.
